Debian Security Advisory DSA-5147-1 security@debian.org
<https://www.debian.org/security/> Salvatore Bonaccorso
May 25, 2022 <https://www.debian.org/security/faq>

Package : dpkg
CVE ID : CVE-2022-1664

Max Justicz reported a directory traversal vulnerability in Dpkg::Source::Archive in dpkg, the Debian package management system. This affects extracting untrusted source packages in the v2 and v3 source package formats that include a debian.tar.

For the oldstable distribution (buster), this problem has been fixed in version 1.19.8.

For the stable distribution (bullseye), this problem has been fixed in version 1.20.10.

We recommend that you upgrade your dpkg packages.

For the detailed security status of dpkg please refer to its security tracker page at:
<https://security-tracker.debian.org/tracker/dpkg>

Further information about Debian Security Advisories, how to apply these updates to your system and frequently asked questions can be found at: <https://www.debian.org/security/>
